- VueJS/Vuex
- d3
- Ruby on Rails
- Elixir
- GraphQL
- Slack API
- Stripe API
- AWS
- Google Cloud/Firebase
- PostgreSQL
- Redis
- Docker/dokku

ABOUT ME

Hello! I'm a highly-experienced team manager and software developer specializing in web and mobile applications. With over 10 years of experience, I have enjoyed building intuitive well-tested products for consumers and businesses in a variety of industries. As a *true* full-stack developer I am comfortable with working within all aspects of a sophisticated application including web and mobile frontend, backend, and server operations.

EXPERIENCE

Owner, Ten October LLC — 2011-Present

I founded Ten October to provide software development services for web and mobile applications. Notable clients and projects include:

Groove — <https://groove.ooo> — React Native, Firebase/Google Cloud
Full-stack development of an app for on-demand coworking implemented with React Native and a Firestore/Google Cloud-based backend.

Hubstaff — <https://hubstaff.com> — Ruby on Rails, VueJS, d3
Led their migration from jQuery to VueJS and implemented new custom interactive charts and reports.

Yala — Retired — Elixir, VueJS, ffmpeg, AWS

Greenfield implementation of a Slack integration and web app for perfectly-timed social posting and branded image/video composition. Work also included hiring and managing a development team as well as server standup and ongoing administration.

Pinecone — Retired — Ruby on Rails, AngularJS v1, AWS

Greenfield implementation of a web app for simple and intuitive single-page product checkout.

Mad Mimi — 2012-14

Full-stack development primarily utilizing Ruby on Rails and PrototypeJS. I was initially responsible for creating Mad Mimi's Etsy product integration and later led projects to improve analytics and implement purchase/checkout features. I voluntarily left Mad Mimi after it was purchased by GoDaddy.
